Cover letter for ICARD practical training

Addressed to:

Organizations involved in practical training for
students of ICARD study program, FTA CULS

Subject: *Practical training for students of Bachelor's programme International Cooperation in Agricultural and Rural Development at the Faculty of Tropical AgriSciences of the Czech University of Life Sciences in Prague*

Dear partners,

practical training is very important part of the Bachelor's study programme International Cooperation in Agricultural and Rural Development (ICARD). It should be completed in companies, governmental or non-governmental institutions which are active in the sphere of foreign trade, development cooperation, rural development and agriculture.

The main goal of the training is to provide for students the insight into problems of company organization and management, to familiarize them with exigencies of the workplace and enable them to gain an overview of the implementation of daily operational tasks and exercises. Students should actively participate in organization's activities and use best efforts to assist in solving specific tasks using the knowledge and skills they have acquired while studying at university. Apart from already mentioned, the training should contribute to the elaboration of Bachelor's thesis through e.g. obtaining useful materials or data, performing analyses or proposing alternative solutions.

The result should be a mutual cooperation when on the one hand students enrich their theoretical knowledge by practical experience, on the other hand, the organization may use professional and technological potential of the university and work effort and enthusiasm of our students.

Let me also mention that CULS students sent to the practical training within their studies are insured by the insurance company Kooperativa pojistovna, a.s., insurance contract No. 7720707919. The insurance covers liability for damage caused by a student or to a student during a practical training completed by other legal or natural person.

I would like to express my thanks in advance for all your help of the student practical training.

Best regards,

Ing. Jiří Hejkrlík, Ph.D.

Course supervisor for Practical training

ICARD study program coordinator
