SCIENCE DIPLOMACY

Building Effective Communication Strategies on Agricultural Biotechnology

August 30th, 31st and September 1st 2021

09:00 - 12:00 CDT | 16:00 - 19:00 CEST | 17:00 - 20:00 EAT

COURSE THEME

The Benefits of Genetic Engineering; Genome Editing and Synthetic Biology and policies and regulations that may impact the technologies' development.

WHO SHOULD ATTEND

- Scientist that has participated or currently conducts research in agricultural biotechnology or has worked at any stage of the biotech product development value chain.
- Science Communicators who are using new tools and approaches to communicate about agriculture and biotechnology are interested in knowing more about how to communicate in decision-making spaces about the technology to encourage science-based policies.
- Women and early career professionals are strongly encouraged to attend.

LEARNING OBJECTIVES

- Learn and understand the key concepts, processes, and approaches, to the formulation of international decisions on Biotechnology that may impede local cost-effective solutions to the loss of biodiversity, climate change, and food insecurity.
- Understand the importance of public participation in international agreements to ensure the advancement of countries' bioeconomy and sustainable development goals through the use of new technologies.
- The webinar will feature the United Nations Convention on Biodiversity as case study.
